COTTON CROP OF 1932-33.—FOURTH REPORT.

[On an average of the five years ending 1930-31, the area under cotton in the Madras Presidency has represented 8·9 per cent of the total area under cotton in India.]

The figures in the report relate to the cotton crop sown between April 1932 and January 1933.

(Estimates up to the 25th January 1933.)

The area sown with cotton is estimated at 1,956,100 acres as against 2,176,700 acres for the corresponding period of last year. There has been a decrease of about 10 per cent.

2. Two hundred and twenty-eight thousand five hundred acres have been reported as sown since the last December forecast was issued. This extent is made up of 87,200 acres of Tinnevelly, 52,000 acres of cambodia, 42,000 acres of North rss and Western, 30,300 acres of Salems and 17,100 acres of Cocanadas. The area sown in December and January is less than that sown in the corresponding period of the previous year by 189,700 acres or about 45 per cent.

3. The decrease in area occurs in all districts outside Vizagapatam, Nellore South Arcot Salem and Trichinopoly. The decrease is marked in the Deccan (— 212,100 acres). It is due partly to unfavourable seasonal conditions and partly to the preference for groundnut.

The area under irrigated cotton, mainly Cambodia, is estimated at 180,700 acres as against 181,900 acres for the corresponding period of last year, an increase of about 99 per cent.

4. Picking of the mungari or early sown crop in the Deccan is over. The yield was below normal due to drought in the growing period. The crop is coming into the market.

Normal yields are expected in all districts outside the Deccan and Nellore. The bulgari or late sown cotton has been affected by drought and the crop is expected to yield only 85 per cent in Bellary and Anantapur.

The seasonal factor for the Presidency works out to 95 per cent of the average as against 82 per cent for the corresponding period of last year. On this basis, the yield works out to 420,000 bales of 400 lb. lint against 440,300 bales for the corresponding period of last year. It is, however, too early to estimate the yield with accuracy as the harvest has not yet commenced in the major portion of the area and much will depend upon the future weather conditions and the attack by insect pests.

5. The estimated area and yield under the several varieties are given below :—
